HOW TO FIND YOUR VATS KEY CODE

STEP 1

- Identify the key.

SINGLE SIDED

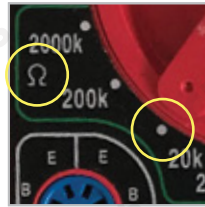

DOUBLE SIDED

STEP 2

- With a multimeter or ohmmeter, figure out the VATS value of the key. Set to the Ω symbol, at the 20k mark.

- Touch the ohmmeter's contacts to both sides of the key. Multiply the result x1000.

Your reading may not match the chart exactly.

FOR EXAMPLE:

Ohm reading = 11.70
 Multiply x1000
 Result = 11,700 ohms

11,700 is closest to code 15 or 11,800 ohms. So in this case, you'd order a #15.

**Always choose the closest ohm number on the chart*

VATS CODE
